

08 November 2024

Dear Dr Karhulathi and the managing board of PCI Registered reports,

REF: PCI Registered Report #783 Identifying relevant experiences to the measurement of social media experience via focus groups with young people: A registered report

Thank you to Matti, Amy, Jana, Elena for taking the time (again) to review our revised stage 2 manuscript and for your kind feedback. We are very pleased that the revisions have improved the manuscript, and now submit the final version.

We have taken the opportunity to give the manuscript a final proof-read and pick up any typos/grammatical errors etc. In addition to the points addressed below, we have amended the sentence in the conclusion noted by Matti (*Our study provides important insights into adolescent social media experiences and represents the first stage of a wider endeavour for robust measure development*). It now reads: *“Our study provides important insights into adolescent social media experiences and represents the first stage of a larger project. It aims to support robust measure development through initial conceptual work with the stakeholder population.”* (p453 L795-797).

Comment	Response
The title now reads "Stage 2 Registered Report". I believe this is a mistake, as there is no reason to have 'stage 2' in the title. Please check.	This has now been removed.
Please remove or edit the words “analysis process has been documented” which seems to be accidentally forgotten in the middle of a sentence.	This has now been removed.
I cannot find COIs stated in the paper. Please add a statement or correct me if I just fail to find it.	A COI statement has now been added at the end of the manuscript, before the references (P45 L835): Conflict of interest disclosure <i>The authors of this article declare that they have no financial conflict of interest with the content of this article.</i>
